 - Flask, Laravel, CodeIgniter 4, Flutter
- **DevOps & Tools**
 - Docker, Laragon, Git, GitLab, GitHub
- **Frontend**
 - HTML, CSS, AdminLTE
- **Database**
 - PostgreSQL, MySQL, phpMyAdmin
- **Others**
 - REST API, MVC, CRUD, IoT (ESP32)

Language

English

Bahasa Malaysia

About Me

I am a passionate and adaptable full-stack developer with hands-on experience in building modern web applications using Laravel, CodeIgniter 4 (CI4), and Python Flask, supported by MySQL, Docker, and Laragon for efficient development and deployment. I specialize in backend architecture, API integration, and system optimization, with a strong grasp of Git-based workflows and DevOps fundamentals. I also develop cross-platform mobile applications using Flutter and Dart, delivering clean, responsive, and maintainable solutions.

Work Experience

October 2025 – Present

Perbadanan Tabung Pembangunan Kemahiran (PTPK),
Kementerian Sumber Manusia

Digital Transformation Officer (F9)

- myPerkasa TVET System Development Using Oracle-Apex as Fullstack developer.
- Collaborated with development team to optimize workflow and system usability.
- Enhancing current system workflow.

March 2023 – July 2024

August 2025 – September 2025

Pusat Latihan Mengajar & Industri (PuLaMi), UPSI

Student Work Scheme (Programmer)

- Development of Module Placement System, Institute Profiling and Cloud Based Learning
- Built backend systems using CodeIgniter 4 with PostgreSQL for both development and production environments.
- Collaborated with the academic and administrative teams to optimize workflows and system usability.

February 2025 – July 2025 (Internship)

REDtone Sdn. Bhd.

Fullstack Developer

- Built a commission system using Python Flask, MySQL, and JavaScript.
- Added features like user roles, approval flow, and status tagging.
- Used Docker and Laragon for development and deployment.
- Applied AdminLTE for a clean and responsive dashboard UI.

July 2020 – November 2020 (Internship)

May 2022 – August 2022 (Fulltime)

Longi (Kuching) Sdn. Bhd.

System Developer

- Developing and Designing a System
- Web Maintenance
- Deploying a system
- Able to finish developing a system with minimal supervision

Projects

Commission System (Version 2.0)

Internship

Billing Approval System

Built with Flask, MySQL, JavaScript, and Docker to automate billing approvals. Included commission status tagging, multi-level approval flow, and a responsive UI.

EdTech360 – Comprehensive Educational Management System

Final Year Project | UPSI

Developed a full-stack system using Flask, MySQL, and AdminLTE to manage academic records, dashboards, and role-based access for admins, teachers, and students.
