Dear Hiring Manager,

I am writing to express my interest in Software Engineering and Application Development opportunities within your organisation. I hold a Bachelor's Degree in Software Engineering and currently serve as a Pegawai Transformasi Digital – F9 (Contract for Service) at Perbadanan Tabung Pembangunan Kemahiran (PTPK), Ministry of Human Resources.

In my current role, I am actively involved in the development and enhancement of MyPERKASATVET, a student loan management portal developed using Oracle APEX. My responsibilities include application development, business workflow implementation, database development, data handling, system enhancement, and translating operational requirements into working system solutions. This experience has strengthened my ability to develop and maintain applications within a real organisational environment.

Beyond my current role, I have hands-on experience with technologies including Oracle APEX, Laravel, CodeIgniter 4, Python Flask, MySQL, PostgreSQL, JavaScript, Docker, and Flutter. My development experience includes web-based business systems, database-driven applications, workflow and approval systems, educational applications, and mobile application development.

I enjoy understanding business requirements and translating them into practical, maintainable software solutions. I am comfortable working with existing systems, troubleshooting issues, learning new technologies, and contributing across different stages of the software development lifecycle.

I am looking to further develop my career as a software engineer while contributing my existing development experience to an organisation where I can continue learning, take on greater technical responsibilities, and deliver reliable solutions that support real business needs.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and technical background could contribute to your organisation.

Sincerely,

EURGIEN ANAK ANTHONY
